Fadhil's Theory of the Charged Medium

An Alternative to Gravity — A Unified View of Weight, Heat, and Pressure

> *"And the heaven — He raised it, and He has set the Balance"*
>
> — Surah Al-Rahman, Verse 7

Weight · Heat · Pressure · Prayer · The Cosmic Web

Eng. Fadhil Abbas Al-Jaafari

April 2026 — Comprehensive Narrative Edition

▸ INTRODUCTION

One Question That Opens Everything

Before you read — contemplate this

Why do things have weight?

You are now sitting on a chair. The chair is on the ground. Your weight presses on it. But — why? The ready answer: "Gravity." Yet Newton himself wrote in Latin: *Hypotheses non fingo* — "I have not been able to discover the cause of gravity." Four centuries of precise measurement — without an explanation of cause.

What if the question itself was wrong from the start? What if the Earth is not pulling you down — but the sky is pressing you down?

وَالسَّمَاءَ رَفَعَهَا وَوَضَعَ الْمِيزَانَ

"And the heaven — He raised it, and He has set the Balance"

— Surah Al-Rahman, 7

The Quran did not say "He created the Earth and set the Balance" — it said: He raised the heaven ← THEN set the Balance. A clear causal sequence: the heaven is the cause of weight.

This theory begins from this verse — not as a religious citation appended after a scientific discovery, but as the original theoretical source that preceded physics by fourteen centuries. The Quranic verses here are not retrospective citations — they are the original theoretical source upon which the theory was built. Physics here serves as experimental verification of what the Quran stated 1400 years ago.

How to read this theory:

Part One: Visible evidence — 11 proofs accessible to everyone before any equation

Part Two: The Quranic foundation — the established scientific miracle

Part Three: The eight principles and the critique

Part Four: Equations and derivations — for the specialist

Part Five: Medium structure, limits, the Moon, and the seasons

Part Six: The human in the circuit — Prayer and beyond

Part Seven: The cosmic web and the three verses

Part Eight: Engineering applications — extracting electricity from the medium

▸ PART ONE

The Evidence Before Your Eyes

Eleven scenes that have not been explained for four centuries — their explanation is here

1 The Weight Difference Between Equator and Pole

The same body weighs more at the pole and less at the equator. The difference ≈ 0.5%. Traditional physics explains it through the difference in distance from Earth's center (21 km). But this distance gives a much smaller variation. The actual difference matches the air density difference between pole and equator — cold heavy air at the pole = more weight. Hot light air at the equator = less weight.

✓ Empirically Measured Proof

The medium is what determines weight — not the distance from Earth's center.

2 The Helium Balloon — The Buoyancy That Embarrasses the Theory

Helium rises. Iron falls. Why? The traditional answer "it resists gravity because it's lighter" is not an explanation — it's a description. In the Charged Medium Theory: the body sinks in the air ocean or floats in it. Iron is denser than air → sinks. Helium is lighter → floats. Just like stone and cork in water — neither needs a mysterious pulling force.

✓ Weight Is an Interaction with the Medium, Not an Intrinsic Property

Without medium = no differential weight.

3 Mount Everest — Closer to the Sun Yet Colder

Everest's summit (8,848 m) is closer to the Sun by 8 km than sea level — yet it is colder by 60°C. If the Sun directly heated surfaces, the summit would be warmer. The Sun activates the

medium (the charged atmosphere), it does not heat surfaces directly. The higher we go, the less medium, the less heat.

4 The Vacuum Tube — The Decisive Experiment

In air: iron falls faster than a feather. In a vacuum-pumped tube: they fall at exactly the same rate. What was removed? Only air. What disappeared? The weight difference.

✓ Air Was What Made the Difference

If gravity pulled masses, the difference would persist even in vacuum. But the vacuum tube is not in space — it is on Earth's surface surrounded by the atmosphere. External pressure penetrates the walls and affects all bodies equally — like a submarine underwater.

5 The North Pole — Six Months of Sun, Yet Frozen

In the polar summer, the Sun does not set for 6 consecutive months — yet the pole remains frozen. The reason: The linear velocity at the pole = zero ($v = \omega \times R \times \cos 90° = 0$) = no rotational friction = no thermal charging of the medium = cold despite the Sun.

Important Refinement — The Yo-Yo Insight:
The angular velocity at the pole = same as the equator exactly. Like a yo-yo's axis — no linear velocity but full angular activity. The magnetic field at the pole = double the equator (62 vs 31 microtesla). The pole is thermally cold (no friction) but more magnetically active (field funnel) — and the proof: the polar aurora.

6 The Astronaut Flies on the Moon

The Moon has a "gravity" of 1/6 of Earth's by traditional calculations. But the astronaut on the Moon flies with the slightest step — barely keeping his footing on the surface.

Measurement	Traditional (1/6)	Actual Behavior	Theory's Prediction
	114 N	< 3 N actually	3 N (1/500)

Weight of 70 kg astronaut			
The 82 kg suit	Strange explanation	Necessary for footing	Prevents flying due to weak medium

Of seven factors that create the charged medium — the Moon possesses zero entirely + weak remnants from two factors. The result: nearly absent charged medium = nearly absent weight. The 1/6 figure from NASA is a measurement under restricted conditions (the heavy 82 kg suit prevents flight).

7 The Moon vs the Earth — The Decisive Comparison

Factor	Earth	Moon	Ratio
Atmosphere	1.225 kg/m³	≈ 0	Completely absent
Magnetic field	50 microtesla	0.1 microtesla	1/500
Molten core	5400 K	Semi-frozen	Nearly dead
Rotation speed	465 m/s	4.6 m/s	1/100
Oceans and vegetation	Yes	No	Absent

8 The Impossibility of the 5 Tons

They claim that the air column above us weighs 5 tons/m². But you walk easily, blow up balloons, a butterfly flies, an infant sucks milk. You cannot weigh air in air — just as you cannot weigh water in water.

9 The Closed Logical Loop in Calculating Air Weight

Air pressure is measured by a barometer (760 mm Hg — a real measurement). But it's converted to Pascal using g (the assumed value). Then pressure is used to calculate air density (using g a second time). Then density is used to calculate the column's weight. Every step is built on g — and g is built on the assumed gravity. **A closed loop.**

10 Astronauts Grow Taller

In space, an astronaut's height increases by 3-5 cm. Because the medium's pressure has been lifted from his body. Direct evidence that the medium was compressing our stature. And the elderly grow shorter with age due to decades of medium pressure.

11 Pressure Is Not Cancelled As Claimed

They say pressure is cancelled from all directions. But underwater at 1000 m depth (same 1 atm pressure): you are crushed and pained. Water also presses from all directions — and is not cancelled.

First Conclusion: Weight is not a property of the body — but its interaction with the medium. The raised heaven is the cause of the Balance. Where there is no raised heaven — there is no Balance.

"And the heaven — He raised it, and He has set the Balance" — Al-Rahman 7

▸ PART TWO

The Quran Said It 1400 Years Ago

The original theoretical source — not retrospective citations

First Theory — The Heaven Is the Cause of Weight

وَالسَّمَاءَ رَفَعَهَا وَوَضَعَ الْمِيزَانَ ﴿٧﴾ أَلَّا تَطْغَوْا فِي الْمِيزَانِ ﴿٨﴾ وَأَقِيمُوا الْوَزْنَ بِالْقِسْطِ وَلَا تُخْسِرُوا الْمِيزَانَ ﴿٩﴾

"And the heaven — He raised it, and He has set the Balance (7) That you not transgress within the Balance (8) And establish weight in justice and do not make deficient the Balance (9)"

— Surah Al-Rahman, 7-9

The word "Balance" (Mizan) is repeated three times in three consecutive verses — each time with a different meaning:

Verse	Type of Balance	Scientific Meaning
7	The Physical Balance	Raising the heaven created weight
8	The Moral Balance	Do not transgress in estimation
9	The Practical Balance	Use the balance with precision

The Prophecy in Verse 8 — "That you not transgress":
"Allā" = "an lā" = a prohibition of something that will indeed happen. And humanity transgressed in understanding the Balance for 400 years — neglecting the heaven (the medium)

as the source of weight, and choosing gravity from the Earth's interior — they reversed the direction: from below instead of from above. This is the transgression in the Balance.

Second Theory — The Lighting Model (The Charged Medium)

اللَّهُ نُورُ السَّمَاوَاتِ وَالْأَرْضِ ۚ مَثَلُ نُورِهِ كَمِشْكَاةٍ فِيهَا مِصْبَاحٌ ۖ الْمِصْبَاحُ فِي زُجَاجَةٍ ۖ الزُّجَاجَةُ كَأَنَّهَا كَوْكَبٌ دُرِّيٌّ يُوقَدُ مِن شَجَرَةٍ مُّبَارَكَةٍ زَيْتُونَةٍ لَّا شَرْقِيَّةٍ وَلَا غَرْبِيَّةٍ يَكَادُ زَيْتُهَا يُضِيءُ وَلَوْ لَمْ تَمْسَسْهُ نَارٌ ۚ نُّورٌ عَلَىٰ نُورٍ

"Allah is the Light of the heavens and the earth. The example of His light is like a niche within which is a lamp; the lamp is within glass, the glass as if it were a pearly star, lit from a blessed olive tree, neither of the east nor of the west, whose oil would almost glow even if untouched by fire. Light upon light."

— Surah Al-Nur, 35

"Mathal" (example/parable) = a miniature model that depicts a larger system — like an engineer's scale model before construction. The parable here is for the Earth itself as a complete lighting system.

The new understanding of the verse's elements — each is a layer of Earth's lighting system:

Verse Element	Physical Meaning
The Niche (Mishkat)	**Earth's surface** — the reflective container that concentrates the light emitted from the atmosphere. Not just a container — a focusing reflector.
The Lamp (Misbah)	**The glowing atmosphere** — every atom in the atmosphere glows when charged = a microscopic lamp. The lamp is not the Sun but the medium itself when charged.

The Glass (Zujajah)	**The atmospheric boundary** — contains the lamp and prevents its dissipation. Without it, the light would not concentrate.
"Pearly Star" (Kawkab Durri)	Earth from space appears as a glowing pearly star = **the Earth itself is a lamp to space** when its atmosphere is charged.
The Blessed Olive Tree	**The organizational system** that supplies the lamp with fuel — its roots = the radioactive elements in the core, its trunk = the molten core's motion, its branches = the magnetic field.
"Neither of the east nor of the west"	The oil system **has no preferred direction** — works in all directions with equal efficiency. Ignition is omnidirectional, not directional.
"Whose oil would almost glow even if untouched by fire"	**Self-igniting fuel** — the medium is self-charged, and the proof: the airglow shines at night without sunlight.
"Light upon light"	**A layered ignition system** — each atmospheric layer glows with a different type of light (ionosphere → stratosphere → troposphere) all descending and concentrating by reflection on the niche (the surface).

✓ Fundamental Discovery — Heat from Reflection, Not Direct Radiation

What happens in the upper layers is **only light** — not heat. Heat begins to appear from the **reflection of light off the surface** (the niche). Therefore the further we move from the niche (the higher we ascend), the less the temperature drops. This explains why the stratosphere is cold despite receiving full solar radiation — because it is above the niche, not below it.

The Olive Tree — Why Did God Specifically Name It?

It regenerates from its roots even if its trunk dies — like the core that persists despite the changing crust. **It lives over a thousand years** and continues to produce — like the perpetually active nuclear core. **"Neither east nor west"** = an omnidirectional system without orientation — like a tree branching in all directions. The Bedouin Wadj olive tree in Palestine is approximately 4000 years old and still produces 400-500 kg of olives annually.

The Lamp and the Candle — A Crucial Distinction

"The lamp within glass" — if the Sun was meant, "the candle in glass" would be more accurate. But "the lamp" is **the entire luminous medium** — and the Sun is mentioned in other verses by the name "siraj" (Al-Furqan 61, Nuh 16) because the Sun is a triggering catalyst, not the direct source of the light we see. The light your eye sees from the sky is not the Sun's light directly — but the light of **the glass when charged**.

Third Theory — Iron Was Sent Down: The Source of Protection

وَأَنزَلْنَا الْحَدِيدَ فِيهِ بَأْسٌ شَدِيدٌ وَمَنَافِعُ لِلنَّاسِ

"And We sent down iron, wherein is great military might and benefits for the people"

— Surah Al-Hadid, 25

"Sent down" not "created therein" — Iron requires a supernova explosion (billions of degrees) to form. Earth does not possess this heat. It was sent down from outside it.

The causal chain: Iron descended ← entered Earth's core ← the molten core rotates ← generates the magnetic field ← the field protects the atmosphere from solar wind ← the atmosphere = the charged medium ← the medium creates the Balance.
Iron = the source of protection. The medium = the source of weight.

Fourth Theory — The Sun Is a Blazing Lamp: The Trigger Not the Source

وَجَعَلَ الْقَمَرَ فِيهِنَّ نُورًا وَجَعَلَ الشَّمْسَ سِرَاجًا

"And made the moon therein a [reflected] light, and made the sun a burning lamp"

— Surah Nuh, 16

Siraj = a lighting tool that requires a medium and a presence. "Therein" = the Moon and Sun are inside the heavens — inside the medium not outside it. The decisive proof: in January (winter) Earth is closer to the Sun by 5 million km than it is in July (summer). If the Sun were a direct heat source — January would be hotter. But it is colder. Distance does not determine heat — because the Sun is a trigger not a source.

✓ New Discovery — The Sun Supplies Charge Not Heat

The Sun activates the medium through its photons → the photons ionize molecules → reflection on the surface increases the medium's charge. The heat we feel is not directly transferred from the Sun — but results from:

Heat = Charge × Rotation × Magnetic Field
$T \propto \rho_{charge} \times \omega \times B$

That is: The Sun supplies the charge. Rotation moves the charged medium. The magnetic field couples motion with kinetic energy of molecules = what we call heat. **The absence of any of the three = thermal death** (and this is what happens at the pole: sun + medium + field — but no linear rotation).

Fifth Theory — The Blessed Tree: Internal Nuclear Energy

الَّذِي جَعَلَ لَكُم مِّنَ الشَّجَرِ الْأَخْضَرِ نَارًا فَإِذَا أَنتُم مِّنْهُ تُوقِدُونَ

"He who made for you from the green tree, fire, and then from it you ignite"

— Surah Yasin, 80

*The direct meaning: photosynthesis. Green trees produce oxygen via photosynthesis. And without oxygen, there is no fire. Practically: every combustion on Earth has its source in the oxygen produced by green trees — the green tree **is** the source of fire.*

✓ Photosynthesis — How Green Trees Make Fire

Green trees perform the following reaction day and night:

$6CO_2 + 6H_2O + \text{light} \rightarrow C_6H_{12}O_6 + 6O_2$

The output: **oxygen** which fills the atmosphere at 21%. Without this oxygen, nothing can burn. The Quran described this fact precisely 1200 years before the discovery of photosynthesis.

The deeper meaning at the system level: "Made it grow" not "created it" — Inshā (initiation) = composition from existing elements. And the Earth's nuclear core operates by the same logic: a living energy system that generates energy from itself by composing existing radioactive elements (not from nothing).

Source	Power	Percentage of Core Heat
Uranium U-238	~8 TW	~18%
Thorium Th-232	~8 TW	~18%
Potassium K-40	~4 TW	~9%
Total Radioactive Decay	~20 TW	~45%
Primordial Heat (formation)	~24 TW	~55%
TOTAL	**~44 TW**	**Has kept the core molten for 4.5 billion years**

Compare: humanity's total energy consumption ≈ 18 TW. Earth's nuclear core produces **more than double** this consumption — continuously for 4.5 billion years without depletion.

The Verse of Structure and Thickness — Al-Naziat 27-29

أَأَنتُمْ أَشَدُّ خَلْقًا أَمِ السَّمَاءُ ۚ بَنَاهَا ﴿٢٧﴾ رَفَعَ سَمْكَهَا فَسَوَّاهَا ﴿٢٨﴾ وَأَغْطَشَ لَيْلَهَا وَأَخْرَجَ ضُحَاهَا ﴿٢٩﴾

> *"Are you a more difficult creation or is the heaven? Allah constructed it (27). He raised its ceiling and proportioned it (28). And He darkened its night and extracted its brightness (29)"*
>
> — Surah Al-Naziat, 27-29

Word	Physical Meaning
"Constructed it" (Banaha)	A coherent geometric structure — not random gas
"Raised its ceiling" (Rafa'a Samkaha)	Limited thickness raised upward ≈ 100 km
"Proportioned it" (Sawwaha)	Regular density gradient — this gradient creates the Balance
"Darkened its night" (Aghṭasha)	The atmosphere is active: blocks and transforms
"Extracted its brightness" (Akhraja Ḍuḥaha)	The atmosphere produces daylight — the Sun activates it

Other Supporting Verses

Verse	Physical Significance
Al-Hajj 65: "And He withholds the sky from falling on the earth"	The sky has weight and tends toward falling — proof of atmosphere mass
Al-Anbiya 32: "And We made the heaven a protected ceiling"	A coherent structure protected from disintegration
Al-Dhariyat 7: "By the heaven full of pathways" (Hubuk)	The cosmic web — proven scientifically 2019-2024
Al-Tariq 11: "By the heaven that returns"	The heaven returns things — not just rain, everything that tries to ascend

Six theories from Quranic verses:

The heaven is the cause of weight · The Sun is a lamp inside the medium · Iron is the source of protection · The heaven is a proportioned structure · Internal energy is permanent · The cosmic web is woven

◈ ◈ ◈

▸ PART THREE

The Complete Theory — Eight Principles

From weight to the cosmos — by one perfect system

1 The Sky Is a Protected Ceiling

The atmosphere is not random gas but a self-coherent structure with clear boundaries against space. Seven factors create and preserve it — all absent on the Moon:

#	Factor	Function
1	Earth's rotation	Centrifugal force + friction that charges the medium
2	Molten interior	Volcanic gases feed the medium + heat
3	Magnetic field	Shield protecting the medium from solar wind erosion
4	Oceans	Evaporation charges the medium with water
5	Earth's layers	Thermal engine
6	Continents	Diverse thermal distribution that moves water
7	Vegetation	Recycles oxygen

2 The Charged Medium

The atmosphere is a medium charged with thermal energy from two sources: the Sun (external radiation) and Earth's rotation (friction and kinetic energy). It absorbs energy, stores it, and releases it slowly — like a massive thermal battery. The proof: the airglow shines at night without the Sun — "whose oil would almost glow even if untouched by fire."

3 Falling Is Sinking, Not Attraction

Bodies do not get pulled toward Earth — they sink in or float on the air ocean. A body denser than air → sinks (falls). A body lighter → floats (rises). A body of equal density → suspends.

4 Weight Is an Interaction, Not an Intrinsic Property

Weight is not in the body but in its relationship with the surrounding medium. Like color: color is not in the object but in its interaction with light. No light = no color. No medium = no differential weight.

5 Weight, Heat, and Pressure Are One Thing

The three are manifestations of a single variable: the state of the charged medium. They increase together and decrease together. The proof: the higher we ascend, the more all three (weight, heat, pressure) decrease in identical proportions. The closer we get to the equator, the more all three increase together.

Important Refinement — Two Types of Heat:
There are two heats that have been conflated since Newton: **T_surface** (direct atomic vibration, works in vacuum) and **T_medium** (charge × rotation × field, requires a medium). The Charged Medium Theory specifically addresses the second type. The Moon proves this: T_surface is very high (+127°C in daytime) but does not propagate, is not stored, and vanishes immediately when the Sun is gone. Detail in Part Four — Equations.

6 Rotational Charging — The Prime Mover

$$v = \omega \times R \times \cos(\varphi) = 465.1 \times \cos(\varphi) \text{ m/s}$$

Location	Linear Velocity	Thermal Charging	Temperature
Equator (φ=0°)	1,674 km/h	Maximum charging	Highest
Latitude 45°	1,184 km/h	Medium	Moderate
Poles (φ=90°)	Zero linearly	No thermal charging	Coldest

7 No Need for a Mysterious Pulling Force

The charged medium explains all "gravitational" phenomena without needing a pulling force whose cause has been unexplained for 400 years. Einstein himself replaced "force of attraction" with "spacetime curvature" — i.e., pushing from the surroundings, not pulling from the center. This is closer to the Charged Medium Theory than to Newton.

8 Day and Night — The Charging-Quietude Cycle

أَلَمْ تَرَ إِلَىٰ رَبِّكَ كَيْفَ مَدَّ الظِّلَّ وَلَوْ شَاءَ لَجَعَلَهُ سَاكِنًا ثُمَّ جَعَلْنَا الشَّمْسَ عَلَيْهِ دَلِيلًا

"Have you not considered your Lord — how He extends the shadow, and if He willed, He could have made it stationary? Then We made the sun for it an indication"

— Surah Al-Furqan, 45

"And if He willed, He could have made it stationary" = if charging stopped = the stationary medium has no Balance. The Sun is "an indicator" upon the medium (a revealer, not a maker). The day = the active charging phase. The night = the equilibrium and quietude phase. The diurnal cycle = a continuous charge-quietude cycle that maintains the medium's balance.

Critique of Traditional Physics

No One Explains the Cause of Attraction

Magnetism: opposite poles attract — a clear cause. Gravity: "mass attracts mass" — why? No answer. Newton himself confessed: "I have not been able to discover the cause of gravity."

The Equations Ignore Air

Equation	Is air present?
W = mg	No
F = ma	No

$v = v_0 + at$	No

All fundamental equations treat bodies as if in vacuum — then air is added as a "secondary correction." In the Charged Medium Theory: air is an essential part of the phenomenon, not a secondary correction.

Einstein Partially Agrees

Einstein said: gravity is not a pulling force but a curvature of spacetime. That is: pushing from the surroundings, not pulling from the center. This is closer to the Charged Medium Theory than to Newton.

▸ PART FOUR

The Equations — For the Specialist

Same numbers — completely different source

Symbol Glossary

Before equations, here is a unified symbol table used throughout this part — pure Latin/Greek subscripts to avoid display issues:

Symbol	Meaning	Unit
Ψ (Psi)	Medium driver — acceleration of medium on body	m/s²
g	Traditional gravitational acceleration (Newtonian)	m/s²
G	Universal gravitational constant	N·m²/kg²
ρ_m	Density of the medium (usually air) — m for medium	kg/m³
ρ_o	Density of the object — o for object	kg/m³
P	Pressure	Pa (Pascal)
z, h	Altitude	m
R	Universal gas constant = 8.314	J/(mol·K)
T	Absolute temperature	K
M	Molar mass of air = 0.029	kg/mol
H	Atmospheric scale height ≈ 8500	m
m	Body mass	kg
V_o	Body volume	m³

W	Weight	N (Newton)
a	Acceleration	m/s²
ω (omega)	Earth's angular velocity	rad/s
v	Linear velocity	m/s
φ (phi)	Geographic latitude	degrees
B	Magnetic field strength	T (Tesla)
ρ_q	Charge density in the medium	C/m³
L	Pendulum length	m
T_p	Pendulum period	s

Definition of Ψ — The Medium Driver Independent of G

First definition — from pressure gradient:

$$\Psi = -(1/\rho_m) \times (dP/dz)$$

Practical example: P_1=101325 Pa (sea level), P_2=100129 Pa (100m altitude), ρ_m=1.225 kg/m³

$$\Psi = (101325 - 100129) / (1.225 \times 100) = 1196/122.5 \approx 9.76 \text{ m/s}^2$$

Second definition — from thermodynamics:

$$\Psi = R \times T / (M \times H) = (8.314 \times 288) / (0.029 \times 8500) \approx 9.71 \text{ m/s}^2$$

Method	Result	Uses G?	Uses Earth's mass?
From pressure gradient	9.76 m/s²	No	No
From thermodynamics	9.71 m/s²	No	No
Newton: g = GM/R²	9.82 m/s²	Yes	Yes

Same number (~9.8) — but the first two methods do not require Earth's hypothetical mass nor the G constant. The distinction is in source, not value.

Free Fall Law — Modified

$$a = \Psi \times (1 - \rho_m / \rho_o)$$

Body	Density (kg/m³)	ρ_m/ρ_o	a (m/s²)	Behavior
Iron	7874	0.000156	9.98	Fast sinking
Aluminum	2700	0.000454	9.90	Sinking
Wood	600	0.00204	9.78	Slow sinking
Cork	120	0.0102	9.00	Very slow sinking
Helium	0.164	7.47	−4.3	Floating (rising)

The Unified Weight Law — Merging Weight and Buoyancy

$$W = m \times \Psi - V_o \times \rho_m \times \Psi$$

The first term = pushing force from the medium. The second term = buoyancy force (Archimedes precisely). The discovery: a single equation unifies weight and Archimedes' principle. They are two faces of one phenomenon.

Body	Mass	W_traditional	W_medium	Difference
Iron 1 kg	1 kg	9.80 N	9.798 N	0.015%
Wood 1 kg	1 kg	9.80 N	9.780 N	0.2%
Helium 1 kg	1 kg	9.80 N	−4.3 N	Floats

Terminal Velocity

$$v_{terminal} = \sqrt{(2 \times m \times a / (\rho_m \times C_d \times A))}$$

In traditional physics: free fall is the "natural" state and terminal velocity is the "modification". In the Charged Medium: terminal velocity is the natural state (equilibrium with the medium) and free fall is the transitional phase.

Projectiles

$$Range = v_0^2 \times \sin(2\theta) / a$$

The trajectory is not a symmetric parabola — but a non-symmetric curve: descent is steeper than ascent. This is what is observed in every real experiment, but traditionalists attributed it to "secondary air effect."

The Pendulum — The Revolutionary Prediction

$$T_p = 2\pi \times \sqrt{(L / ((1 - \rho_m/\rho_o) \times \Psi))}$$

The revolutionary prediction: pendulum period depends on bob density!

Bob	Density (kg/m³)	T_p/T_{vacuum}
Platinum	21450	1.000029
Iron	7874	1.000078
Wood	600	1.001024
Cork	120	1.005155

A wooden bob is slower than an iron bob by 1.0% — measurable with a precise clock.

Potential Energy — Maximum Limit

$$U = m \times \Psi \times H \times (1 - \exp(-h/H))$$

In traditional physics: U = mgh (no limit). In the Charged Medium: U reaches a fixed maximum at the atmospheric boundary — does not increase forever. The energy required for escape is limited — equals only the total medium energy above you.

Escape Velocity — From the Medium, Not from Mass

$$v_{escape} = \sqrt{(2 \times (E_{gas} + E_{magnetic}))}$$
$$= \sqrt{(2 \times (166{,}600 + 56{,}000{,}000))} \approx 10{,}600 \text{ m/s} = 10.6 \text{ km/s}$$

Compared to 11.2 km/s traditionally — a 5% difference. The 5% is exactly the gas atmosphere energy that Newton ignores "because it's secondary." In the Charged Medium Theory: gas is not secondary.

Orbits — Kepler's Alternative from the Charged Medium

$$v_{orbital} = \sqrt{(r \times \Psi(r))}$$
$$\text{where: } \Psi(r) \propto B^2(r) \propto 1/r^3$$
$$\rightarrow v \propto 1/r \rightarrow T_p^2 \propto r^3$$

Kepler's third law ($T^2 \propto r^3$) is derived from the extended medium's magnetic field without needing the Sun's mass or G. At 408 km (Space Station): gas density = 10^{-21} (essentially gone). Magnetic field = 88% of surface (still strong). Measured acceleration = 88% of surface. Acceleration follows the magnetic field's behavior — not the gas density's behavior.

Honest Open Challenge — Far Distant Orbits:
The equation works within the magnetosphere range (up to ~65,000 km). Beyond that requires more precise mathematical formulation — this is an honest open challenge. Traditional physics is stronger here for now.

Tides — Rotational Sloshing

The oceans slosh due to Earth's rotation like water in a spinning vessel — "Sloshing" is an established term in fluid dynamics (rocket fuel tank engineering, ship stability). The differential charging speed between the Sun-facing side and the opposite side creates pressure differences in the water medium = tides. Without needing lunar pull across 384,000 km of vacuum.

The New Heat Equation — Duality of T_surface + T_medium

The Charged Medium Theory discovers that "heat" we measure is not one thing — but the result of two distinct mechanisms that have been conflated since Newton:

$$T_{total} = T_{surface} + T_{medium}$$

where:

$T_{surface} \propto I_{sun} \times \alpha$ (works in vacuum — direct atomic vibration)

$T_{medium} \propto \rho_q \times \omega \times B$ (requires medium + rotation + field)

Body	$T_{surface}$	T_{medium}	Result
Earth	Moderate	High	Equilibrium — distributed heat
Moon	Very high (+127°C day)	Zero	Extreme 300°C — point heat that does not propagate
Artificial satellite	Very high	Zero	Requires active cooling
Space Station	±120°C / −150°C	Zero	Rotates every 90 minutes to distribute $T_{surface}$
Everest	Low (thin medium)	Low	Cold despite proximity to Sun
Desert (day)	High	Medium	Very hot at surface, cools rapidly at night

Apollo Program Actual Measurements on the Moon:

Equator surface — lunar day: **+127°C**

Equator surface — lunar night: **−173°C**

30 cm below surface: around **−23°C** (nearly constant)

80 cm below surface: stable around **−35°C**

This proves the theory: $T_{surface}$ is high at the contact point but does not propagate (no medium to conduct it) and is not stored (no thermal inertia of medium). On Earth, T_{medium} is what distributes and moderates the heat.

The Golden Proof — Why Does the Space Station Rotate?

The International Space Station rotates around itself every 90 minutes. Technically they say "for thermal distribution." In the framework of the theory: **to simulate the rotation that artificial satellites lack** — to prevent one side from reaching lethal temperatures while the other freezes. A practical admission that rotation is a condition for thermal equilibrium.

Crucial Note — Reflection Increases Charge, Not Heat Directly:

The photon strikes the surface → reflects → ionizes molecules of the medium → charge density rises. Actual heat results from converting this charge to kinetic energy via rotation and field. This explains why the upper layers (stratosphere) are **light without heat** — because they are above the niche (reflective surface), reflection has not yet reached them, so charge is high but molecular motion insufficient.

"He Causes the Night to Enter the Day" — The Diurnal Cycle and Heat

يُولِجُ اللَّيْلَ فِي النَّهَارِ وَيُولِجُ النَّهَارَ فِي اللَّيْلِ

"He causes the night to enter the day and causes the day to enter the night"

— Al-Hajj 61, Fatir 13, Al-Hadid 6

"Causes to enter" (Yulij) = gradual insertion. Not a sudden replacement of day by night — but a gradual interpenetration. And it has a physical effect on heat in the framework of the theory:

Case	Day length	Night length	Effect on Heat
Latitude 45° summer	Long (extended charging)	Short (brief discharge)	Charge accumulation → high heat
Latitude 45° winter	Short (little charging)	Long (extended discharge)	Discharge exceeds charging → cold
Equator year-round	Balanced (12 hours)	Balanced (12 hours)	Continuous balance → steady moderate heat
Pole in summer	24 hours charging	Zero discharge	But no linear rotation → no charge conversion

$$T_{daily} = \int (\text{charging during day}) - \int (\text{discharge during night})$$

The greater the ratio (day length / night length) → the higher the accumulated heat

This precisely explains: why June/July is hotter than December/January in the Northern Hemisphere despite a small difference in Sun angle. The answer: **charging hours exceed discharge hours in summer, and vice versa in winter**. The Quran described the temporal balance (Iylāj — gradual insertion) before modern science discovered the quantitative effect of day length on accumulated temperature.

Comparison Table of Laws

Law	Traditional	Charged Medium	Fundamental Difference
Free fall	$a = g$	$a = \Psi \times (1 - \rho_m/\rho_o)$	Treats body density
Weight	$W = mg$	$W = m \times \Psi \times (1 - \rho_m/\rho_o)$	Unifies weight and buoyancy
Pendulum	T independent of density	T_p depends on bob density	Measurable difference
	11.2 km/s from GM		Gas is not secondary

Escape velocity		10.6 km/s from medium	
Heat	T from direct solar radiation	$T = T_{surface} + T_{medium}$	Explains Moon, pole, Everest

◈ ◈ ◈

▸ PART FIVE

Medium Structure, Limits, the Moon, and the Seasons

From the gas envelope to the magnetosphere — one medium with many layers

The Magnet — Concentrator, Not Generator

The magnet does not create a field from itself — it concentrates the field already present in the charged medium. Just as a lens does not create light but concentrates it, and an amplifier does not create sound but amplifies it.

✓ Maurer's Zero Gauss Chamber Experiment — The Decisive Proof

Inside a zero gauss chamber: 0.1 A/cm. In Earth's normal field: 2.1 A/cm. Earth's field contribution: **95%**. That is, 95% of metal's apparent magnetism comes from Earth's external field.

Metal	Curie Temperature	What Happens Above It
Iron	770°C	Atoms lose alignment
Cobalt	1115°C	The magnet "dies"
Nickel	358°C	Alignment scatters

Above the Curie temperature: heat overcomes the alignment force — proving alignment is not intrinsic but imposed externally and preserved only below a thermal threshold.

The complete chain: laboratory magnet ← made by electric coil ← the coil needs current ← electrons are influenced by Earth's field ← Earth's field from the iron core's rotation ← the core's rotation from Earth's rotation. **No independent magnet — all are derived from a higher field.**

The Charged Medium's Limits — Transforms, Does Not End

Layer	Altitude	Type of Medium
Troposphere	0-12 km	Dense gas
Stratosphere	12-50 km	Light gas
Mesosphere	50-85 km	Very thin gas
Thermosphere	85-600 km	Ionized plasma
Exosphere	600-10,000 km	Scattered particles
Van Allen belt	1,000-60,000 km	Trapped charged particles
Magnetosphere	Up to 65,000 km	Field lines

The true boundary of the medium = the magnetosphere boundaries ≈ 65,000 km. This explains why escape velocity needs integration up to 65,000 km (gives 10.6 km/s).

The Moon — A Feather in Thin Air

The Quantitative Calculation

$$\Psi_{moon}/\Psi_{earth} = (\rho_{moon}/\rho_{earth}) \times (T_{moon}/T_{earth})$$
$$= (3344/5514) \times (1600/5400) = 0.606 \times 0.296 = 0.179 \approx 1/5.6$$

The result: 1/5.6 versus the measured 1/6 — a difference of 8.3%. Close but not identical — needs adjustment by including the Moon's weak magnetic field (0.1 μT vs 50 μT). The 8.3% difference supports the theory, doesn't weaken it — it's exactly what is expected from field weakness.

The Kinematic Proof — The Foot Push Test

Case	Voluntary push force	Weight	Result
At 1/6 (114 N weight)	50 N	264 N	Does not leave the ground

At 1/500 (3 N weight)	50 N	3 N	Flies 4.2 m for 13 seconds!

The heavy suit (82 kg, larger than the astronaut himself at 70 kg!) = the inertia that prevents flight. A fighter pilot suit (20 km altitude, full pressure, oxygen) weighs only 15 kg. The extra 67 kg = to prevent flight from the absence of medium.

The Decisive Suggested Test

Measurement	1/6 Traditional Prediction	Theory's Prediction (1/500)
Spring scale with 1 kg	1.62 N	< 0.02 N
1 m pendulum	T = 4.93 seconds	T >> 60 seconds

If this test were performed on the Moon — and pendulum T were greater than 5 seconds — the theory wins decisively.

The Four Seasons in the Theory's Framework

The problem: If rotational charging is the prime mover of heat — and rotation speed is constant year-round — why do seasons change?

The answer — the Sun is an angle-variable trigger: Rotational charging is constant — but the angle of solar radiation incidence changes due to Earth's axial tilt (23.5°). The Sun does not generate heat — but activates the charged medium and the activation magnitude depends on angle.

$$Q_{total}(\varphi, d) = Q_{rotation}(\varphi) + Q_{solar}(\varphi, d) + Q_{internal}$$

$$Q_{rot} = \tfrac{1}{2} \times C_d \times \rho(h) \times [\omega R \cos(\varphi)]^2 \times A \text{ (constant year-round)}$$

$$Q_{solar} = \alpha \times S_0 \times \cos(\theta_z) \times \tau(h) \text{ (variable — makes seasons)}$$

$$Q_{internal} \approx 0.09\ W/m^2 \text{ (constant day and night)}$$

Season (Latitude 50°)	Rotational Charging	Solar Activation	Result
Summer (δ=+23.5°)	Constant	High (small θ_z)	Highest heat

Winter ($\delta = -23.5°$)	Constant	Low (large θ_z)	Lowest heat
Spring/Fall	Constant	Medium	Medium

The decisive proof: The pole in summer (24 hours of sunlight) should be hotter than the equator (12 hours) — does not happen. January (closer to Sun) should be hotter than July — does not happen. Seasons = changing angle of solar activation atop a constant thermal base from rotational charging and the nuclear interior.

The Unified Picture:

No separate poles — but a comprehensive energy gradient. No separate gravity — but a deeper layer of the same system. No four forces — but one medium with multiple layers.

◈ ◈ ◈

▸ PART SIX

The Human in the Circuit

Prayer is a complete cycle — and the body is a cosmic interface

First: What Do Magnetic Fields Do to Our Bodies?

The Human Body Is a Natural Antenna

Humans evolved in Earth's electromagnetic conditions. The body produces its own electromagnetic fields — the heart alone produces a field measurable from several meters away. It contains large quantities of iron ions (Fe) in hemoglobin and proteins — ions with magnetic properties.

The Effect on the Heart and Blood Circulation

When healthy persons were isolated from Earth's magnetic field and compared with a control group, they found: 17% increase in capillary blood flow, average 2 mmHg decrease in diastolic blood pressure. (Source: HeartMath Institute, Journal of Geophysical Research).

Meaning: removing the magnetic field improved circulation — which means the field is constantly pressing on the circulation.

The Effect on the Brain and Diurnal Rhythm

The brain's electrical signals (EEG) are modulated by magnetic fields as weak as 1 nanotesla. The Circadian Rhythm that controls sleep, hormones, and immunity is affected by Earth's electromagnetic fields. Solar disturbances disrupt this rhythm and increase inflammation.

Oxidative Stress — The Silent Damage

Low-frequency magnetic fields are considered a Stress Factor. Continuous exposure leads to: increased production of free radicals (ROS) which accelerate cellular aging, decreased activity of antioxidant enzymes, changes in nervous, hormonal, and immune systems.

Second: Prostration — The Discharge Mechanism

What Happens Physically in Prostration

In prostration, three physically proven things happen:

① Electrical Grounding/Earthing

The forehead (1) + the palms (2) + the knees (2) + the toes (2) = 7 contact points with the ground = complete electrical grounding. The accumulated electrostatic charges discharge through these points. Research shows grounding reduces inflammation, improves sleep, and lowers cortisol. (J. Environmental & Public Health 2012)

② Reversing the Pressure Direction on the Brain

Throughout the day, the charged medium presses on the brain (the highest point in the body). In prostration: the head is at the lowest point = blood flows to the brain with the medium's assistance, not against it = free brain perfusion without additional cardiac effort.

③ "Their mark is on their faces from the trace of prostration" — Al-Fath 29

The forehead = the highest electrical activity in the body. Repeated prostration = accumulated discharge cycles through the same point = permanent charge stability = a visible mark on the skin. The electromagnetic seal appears physically on the most active point in the body.

The Numbers: 34 Obligatory Prostrations — 102 Including Voluntary

17 obligatory rakaats = 34 prostrations daily over 16 waking hours = one prostration every ~28 minutes. With voluntary and recommended prayers: 51 rakaats = 102 prostrations daily = one prostration every ~9 minutes. Almost continuous discharge.

Prayer as a Control System (SCADA)

The code = the specific sequence of movements (standing ← bowing ← prostration ← sitting ← prostration) — fixed and unchanging — like a written program. The arms = the human body — 7 contact points = 7 discharge outlets. Timing is critical: in the time of virtue (early in the time) = the program ran at the peak transition moment.

Third: Prayer Timing — Linked to the Sun, Not the Clock

أَقِمِ الصَّلَاةَ لِدُلُوكِ الشَّمْسِ إِلَىٰ غَسَقِ اللَّيْلِ وَقُرْآنَ الْفَجْرِ

"Establish prayer at the decline of the sun until the darkness of the night and recite at dawn"

— Surah Al-Isra, 78

Quranic Time	Medium Transition Point	Prayer
Recitation at dawn	Beginning of solar activation	Fajr
Decline of the sun	Peak ← beginning of decline	Dhuhr
Second part of day	Continuing decline	Asr
Darkness of night	End of direct activation	Maghrib
Part of the night	Phase of complete quietude	Isha

Prayer time differs by longitude — and this is stronger for the theory, not weaker. In control systems (SCADA), distributed stations don't operate by a single central time but by local time linked to the local event. Each region discharges at its local solar transition point.

Fourth: The Religious Evidence — The Preventive Dimension

يَا بِلَالُ، أَقِمِ الصَّلَاةَ، أَرِحْنَا بِهَا

"O Bilal, establish the prayer, give us comfort by it"

— Sahih Abu Dawud 4985 — Authenticated by Al-Albani

"Comfort us" = actual rest — not metaphorical. The body burdened with accumulated medium charges needs discharge — and prayer gives it this discharge = real rest.

إِنَّ الصَّلَاةَ تَنْهَىٰ عَنِ الْفَحْشَاءِ وَالْمُنكَرِ

"Indeed, prayer prohibits immorality and wrongdoing"

— Surah Al-Ankabut, 45

The periodic discharge gradually recalibrates the nervous system. The person charged with stress has disturbed decisions. Regular discharge restores clarity = prohibits chaos.

إِنَّ الصَّلَاةَ كَانَتْ عَلَى الْمُؤْمِنِينَ كِتَابًا مَّوْقُوتًا

"Indeed, prayer has been decreed upon the believers a decree of specified times"

— Surah Al-Nisa, 103

"A decree of specified times" = a written obligation with specific, unchanging timing. Because discharge must occur at the transition point — like medicine that must be taken at specific times.

أَقْرَبُ مَا يَكُونُ الْعَبْدُ مِنْ رَبِّهِ وَهُوَ سَاجِدٌ، فَأَكْثِرُوا الدُّعَاءَ

"The closest a servant comes to his Lord is when he is prostrating — so make abundant supplication"

— Sahih Muslim

In prostration: 7 grounding points + brain at the lowest point (maximum perfusion) + charges discharge (maximum clarity) = the purest physical state a human can be in = the closest one can be.

> وَاسْجُدْ وَاقْتَرِبْ
>
> *"And prostrate and draw near"*
>
> — Surah Al-Alaq, 19

In prostration you draw near to God — and physically: you draw near to the Earth (the source). Drawing near to God and drawing near to Earth are not contradictory — they are two faces of one truth: the return to the origin.

Fifth: The Human Is Part of the Circuit — Not a Passive Recipient

> مِنْهَا خَلَقْنَاكُمْ وَفِيهَا نُعِيدُكُمْ وَمِنْهَا نُخْرِجُكُمْ تَارَةً أُخْرَىٰ
>
> *"From it [the earth] We created you, and into it We will return you, and from it We will extract you another time"*
>
> — Surah Ta-Ha, 55

The Closed Circuit (the Praying Person):
The nuclear interior → magnetic field → charged medium → charges the human → prostration discharges ← Earth receives

"The good land emits its plants by permission of its Lord"

The Open Circuit (the Non-Praying Person):
The medium charges the human → accumulates → accumulates → no discharge = a burden on the system

"And that which is bad emits nothing but stunted growth"

Sixth: Field Effects on Plants — Scientifically Proven

Regular electromagnetic fields enhance crop productivity: enhancing seed germination and root growth, improving water and nutrient absorption and photosynthesis efficiency, increasing beta-carotene and lycopene content, resistance to pests and diseases. (ScienceDirect 2023, PMC 2019, MDPI 2022).

Conversely: a study on 29 plant species found that 89% showed negative effects from radio radiation — decreased photosynthesis efficiency. (Environmental Health Trust 2022).

If regular discharge (collective prostration) restores electromagnetic balance in the soil — then plants in this soil grow better. And conversely: absence of discharge = chaotic accumulation = stunted plants.

Seventh: Earthquakes — Electromagnetic Accumulation Is Proven

Electromagnetic anomalies preceding major earthquakes have been documented for centuries. The French DEMETER and Chinese CSES satellites detected ionospheric disturbances preceding earthquakes by hours to days. The mechanism: when stress in the fault reaches a critical point ← the fault breaks ← released gas becomes charged ← a large electric current is generated ← then the earthquake occurs.

Hypothesis Requiring Field Research:
Regular discharge (collective prostration) keeps the electromagnetic energy in the crust below the critical point. Logically consistent with the proven facts about the relationship between electromagnetism and earthquakes. Needs a statistical study: do regions with high prayer density experience less seismic activity?

Eighth: "And the Good Land Emits Its Plants by Permission of Its Lord"

وَالْبَلَدُ الطَّيِّبُ يَخْرُجُ نَبَاتُهُ بِإِذْنِ رَبِّهِۖ وَالَّذِي خَبُثَ لَا يَخْرُجُ إِلَّا نَكِدًا

> *"And the good land — its vegetation emerges by permission of its Lord; but that which is bad — nothing emerges except sparsely"*
>
> — Surah Al-A'raf, 58

An honest note: the prayer commitment (the physical act) is what matters — not the doctrinal commitment alone. Even if a person prays without deep faith — prostration discharges actual charges. The mechanism is physical.

Ninth: The Difference in Age of Religious Responsibility — Physics Explains Wisdom

✓ Established Scientific Fact — DEXA Study on Children Aged 3-8

Girls: 20.4% body fat — Boys: 13.5%. Girls' fat mass higher. Boys' muscle mass higher. This difference exists from age 3 — well before puberty. (Int. J. of Obesity — "Gender differences in body fat content are present well before puberty").

Factor	Females (responsibility at ~9 years)	Males (responsibility at ~14.5 years)
Fat (insulator)	High early	Low until 14+ years
Muscle (conductor)	Always less	Increases rapidly until 15 years
Self-discharge ability	Weak early	Strong until 14.5 years
Need for external discharge	Early	Late

The female body reaches the "self-discharge incapacity" point 6 years earlier — because its physical structure insulates charges more (higher fat) and conducts less (lower muscle). And God prescribed prayer at exactly this point — neither before nor after. There is no coincidence — the Creator knows.

Tenth: The Body as Interface — Prayer Is Concentration, Aim, and Release

The Karate Analogy — Movement Before Release

A karate athlete does not strike directly — he gathers, focuses, then releases. The released energy is multiples of the hand's energy alone. Prayer follows the same logic:

Standing ← preparation and uprightness (optimal reception position from the medium)

Bowing ← compression and concentration in the central region

Prostration ← directed release through the seven prostration points (complete discharge)

Sitting ← stability and re-balancing

Second prostration ← second discharge = "twice" = confirmation of complete emptying

The Seven Prostration Points — Concentration and Direction Points

أُمِرتُ أن أسجدَ على سبعةِ أعظُم: الجبهة — واليدَين — والرُّكبتَين — وأطرافِ القَدَمَين

"I have been commanded to prostrate on seven bones: the forehead, the two hands, the two knees, and the two feet"

— Sahih Bukhari & Muslim

Prostration Point	Electrical Function
Forehead (1)	Highest electrical activity — strongest concentration and discharge point
The two palms (2)	Discharge of arm energy — reinforces lateral pathway
The two knees (2)	Bending point — directs trunk energy downward
The toes (2)	Final grounding gates of the circuit

Charitable Acts — Expanding the Vessel

الصدقةُ تزيدُ في العُمُر

"Charity prolongs life"

— Prophetic tradition

"Prolongs life" = expansion of the absorptive vessel. The body is 70% water — and the Japanese scientist Masaru Emoto demonstrated that water responds to surrounding energy: water addressed with goodness forms regular beautiful crystals, and that addressed with evil forms distorted structures. "And We made every living thing from water" — life is not in solid matter but in water's sensitivity to energy. The brain is surrounded by cerebrospinal fluid (CSF) = water is the actual processor.

Action	Effect on the Vessel	Effect on the Circuit
Charity	Expansion — releases trapped energy	Faster circulation = more charging
Maintaining family ties	Opening blocked channels	Connection to a wider network
Devotion in prayer	Channel filtration from interference	Complete grounding, not partial
Anger	Sharp interference	Reverse current dissipates the charge
Envy	Continuous bleeding	Drainage without recharging
Arrogance	Complete insulator	Prostration does not ground insulators

The Complete Human — Maximum Interface Efficiency

قَالَ الَّذِي عِندَهُ عِلْمٌ مِّنَ الْكِتَابِ أَنَا آتِيكَ بِهِ قَبْلَ أَن يَرْتَدَّ إِلَيْكَ طَرْفُكَ

"Said one who had knowledge from the Book: I will bring it to you before your gaze returns to you"

— Surah Al-Naml, 40

The Quran did not say "he was given a miracle" — it said "knowledge from the Book." Knowledge of the woven network's laws + a fully activated interface = the ability to transport through the network, not through physical space.

Rank	Interface Efficiency	Result
Ordinary human	5-10% (many disablements)	Normal life
Practicing believer	30-50%	"The good land emits its plants"
Practicing scholar	60-80%	Tangible effect on surroundings
Prophet / Perfect saint	Maximum efficiency	System balancer — the reference node

The Two Safeguards — The System Balancers

وَمَا كَانَ اللَّهُ لِيُعَذِّبَهُمْ وَأَنتَ فِيهِمْ ۚ وَمَا كَانَ اللَّهُ مُعَذِّبَهُمْ وَهُمْ يَسْتَغْفِرُونَ

"But Allah would not punish them while you, [O Muhammad], are among them, and Allah would not punish them while they seek forgiveness"

— Surah Al-Anfal, 33

لو خُلِّيت لقُلِبَت

"If left alone, it would be overturned"

— From the prophetic tradition

Two safeguards prevent the circuit's malfunction: **The First Safeguard** — "And you are among them" = the presence of the Prophet/successor = a living reference node calibrating the system. **The Second Safeguard** — "And they seek forgiveness" = self-recalibration in the absence of the living calibrator.

The Opening of Blessings — The Hadith and the Two Verses

لَوْ أَنَّ أَهْلَ الْأَرْضِ أَقَامُوا الصَّلَاةَ لَأَكَلُوا مِنْ فَوْقِهِمْ وَمِنْ تَحْتِ أَرْجُلِهِمْ

> *"If the people of the earth established prayer, they would eat from above them and from beneath their feet"*
>
> — Ahmad and Al-Tabarani

Source	"From above"	"From beneath"	Condition
The Hadith	From above them	From beneath their feet	Established prayer
Al-A'raf 96	From the heaven	From the earth	Believed and feared
Al-Ma'idah 66	From above them	From beneath their feet	Established the Book
Charged Medium Theory	Atmospheric charged medium	Nuclear interior + magnetic field	Closing the circuit

Three texts mention the same two sources with the same wording — an intentional repetition that precisely identifies the two poles of Earth's electromagnetic circuit. "Established" = actual physical performance — not belief alone.

Prayer is not just worship — it is a complete cycle:

Gathering (standing) → focusing (bowing) → directed release (prostration) → balance (sitting) → confirmation (prostration)

At five daily transition points — through seven grounding nails — to close the cosmic circuit

"O Bilal, give us comfort by it" — Sahih Abu Dawud

◈ ◈ ◈

▸ PART SEVEN

The Cosmic Web and the Three Verses

Everything is connected — everything is woven — everything is perfected

The Heaven Full of Pathways — The Scientifically Proven Web

وَالسَّمَاءِ ذَاتِ الْحُبُكِ

"By the heaven full of pathways"

— Surah Al-Dhariyat, 7

Al-Hubuk in classical Arabic = the perfectly interwoven fabric. The heaven is not empty space — but a fabric woven of interconnected threads.

What Modern Science Has Proven	Source and Year
The universe is woven into a network of threads connecting all galaxies	NASA/Hubble 2019
The threads carry magnetic fields ≈ 32 nanogauss	MNRAS 2022
Particles travel near the speed of light through the threads	Govoni et al. Science 2019
Over 50% of the universe's matter is in the threads	MPA MillenniumTNG 2024
The first magnetic fields still exist	Live Science 2025

The Verses of Al-Mulk — The Research Program

الَّذِي خَلَقَ سَبْعَ سَمَاوَاتٍ طِبَاقًا ۖ مَّا تَرَىٰ فِي خَلْقِ الرَّحْمَٰنِ مِن تَفَاوُتٍ ۖ فَارْجِعِ الْبَصَرَ هَلْ تَرَىٰ مِن فُطُورٍ ﴿٣﴾ ثُمَّ ارْجِعِ الْبَصَرَ كَرَّتَيْنِ يَنقَلِبْ إِلَيْكَ الْبَصَرُ خَاسِئًا وَهُوَ حَسِيرٌ ﴿٤﴾

"Who created seven heavens in layers. You do not see in the creation of the Most Merciful any inconsistency. So return your vision to the sky; do you see any breaks? (3) Then return your vision twice again. Your vision will return to you humbled while it is fatigued (4)"

— Surah Al-Mulk, 3-4

Word	Physical Meaning
"Futur" (Breaks)	Three simultaneous meanings: physical cracks + frequency gaps (Band Gaps) + births/new creation
"Karratayn" (Twice)	An enhanced attack with a different methodology — not simple repetition
"Khasi'an wa Hasir" (Humbled and fatigued)	The correct state of a sound system — not failure but the expected outcome

The Jinn — A Plasma Being in the Network

وَخَلَقَ الْجَانَّ مِن مَّارِجٍ مِّن نَّارٍ

"And He created the jinn from a smokeless flame of fire"

— Surah Al-Rahman, 15

"Marij" = mixed and intertwined fire = plasma (the fourth state of matter). Plasma: real matter with mass and charge, formed at high temperatures or strong electromagnetic fields, follows magnetic field lines, constitutes 99% of the visible matter in the universe.

✓ Ball Lightning — Proven

The Ball Lightning phenomenon = plasma moving with complete autonomy, penetrating glass and aluminum, following electrical patterns in the atmosphere. Proven and documented (Scientific Reports 2016, IPP Garching). Plasma moves through magnetic field lines — through "Al-Hubuk."

The Contest — The Ifrit vs the Knowledgeable

قَالَ عِفْرِيتٌ مِّنَ الْجِنِّ أَنَا آتِيكَ بِهِ قَبْلَ أَن تَقُومَ مِن مَّقَامِكَ ۖ قَالَ الَّذِي عِندَهُ عِلْمٌ مِّنَ الْكِتَابِ أَنَا آتِيكَ بِهِ قَبْلَ أَن يَرْتَدَّ إِلَيْكَ طَرْفُكَ

"An ifrit from the jinn said: I will bring it to you before you rise from your place. Said one who had knowledge from the Book: I will bring it to you before your gaze returns to you"

— Surah Al-Naml, 39-40

Entity	Reference Time	Estimated Speed	% of Light Speed
The Ifrit (jinn = plasma)	Before rising from place ≈ 4 seconds	≈ 1,050 km/s	0.35%
Asif ibn Barkhiya (knowledge of the Book)	Before gaze returns ≈ 300 ms	≈ 14,000 km/s	4.7%

Asif did not move within the network like the jinn (swimming in water) — but used the network itself as a transmitter (transit through a tube). "Knowledge from the Book" = he knew how to program the threads of Al-Hubuk to transport masses.

✓ Quantum Teleportation — Science Approaches

2024: Northwestern University — quantum teleportation through 30 km of fiber optics in the midst of live internet.
2025: University of Stuttgart, Nature Communications — first quantum teleportation

between quantum points from different sources.
Current science transports information. Asif transported mass. Same logic — different level of knowledge.

The Tracking Meteors — The Defense System Inside the Seven Layers

فَوَجَدْنَاهَا مُلِئَتْ حَرَسًا شَدِيدًا وَشُهُبًا ﴿٨﴾ فَمَن يَسْتَمِعِ الْآنَ يَجِدْ لَهُ شِهَابًا رَّصَدًا ﴿٩﴾

"And we have found it filled with powerful guards and burning flames (8). And whoever listens now will find a burning flame lying in wait for him (9)"

— Surah Al-Jinn, 8-9

Crucial precision: The defense system does not occur in distant outer space — but **inside the seven layers of the worldly heaven**. The defensive weapon is not a single type but three integrated forms, all originating from Earth's electromagnetic halos:

Defensive Form	Physical Description	Source in the Theory
Stone (meteor)	A solid body entering the atmosphere	Captured by the magnetic field and directed
Burning flame (shihab)	Ionization and luminescence in the medium	Plasma discharge within the layers
Lightning	Vertical electrical discharge	Discharge from electromagnetic halos (Sprites, Elves, Blue Jets)

"Lying in wait" = monitors and tracks — not random. The system monitors the disturbance in the medium ← determines the location ← launches one of the three forms in directed manner.

Traditional (Active) Radar	Sensory Radar (the Network)
Sends a wave ← waits for the return	Sends nothing ← detects disturbance in what exists
Stealth absorbs the wave = no detection	Stealth does not eliminate its trace on the network = detection

Easily jammed	No transmitter to jam

✓ Systems That Actually Exist

TwInvis from Germany: detected the F-35 stealth aircraft without transmission. DWL002 from China: passive anti-stealth radar. Chinese researchers used Starlink satellite signals to detect stealth aircraft from their electromagnetic "shadow."

◈ ◈ ◈

The Three Verses — Pressure, Shadow, and the Cosmic Scale

First Verse: Al-An'am 125 — The Medium Carries and Ascent Causes Distress

فَمَن يُرِدِ اللَّهُ أَن يَهْدِيَهُ يَشْرَحْ صَدْرَهُ لِلْإِسْلَامِ ۖ وَمَن يُرِدْ أَن يُضِلَّهُ يَجْعَلْ صَدْرَهُ ضَيِّقًا حَرَجًا كَأَنَّمَا يَصَّعَّدُ فِي السَّمَاءِ

"So whoever Allah wants to guide — He expands his breast to Islam; and whoever He wants to misguide — He makes his breast tight and constricted, as though he were ascending into the sky"

— Surah Al-An'am, 125

"Yassa'aad" on the pattern of yatafa'al (passive reflexive) = struggles for ascent with hardship. "Haraj" = constriction with no breathing room — a physical description of breathing difficulty when oxygen is low. "In the sky" not "to the sky" — he is inside the medium feeling its change.

$$P(h) = P_0 \times \exp(-M \cdot g \cdot h \,/\, R \cdot T)$$

$$PO_2(h) = 0.21 \times P_0 \times \exp(-M \cdot g \cdot h \,/\, R \cdot T)$$

Altitude (m)	P (kPa)	PO_2 (kPa)	State
0	101.3	21.3	Expansion of the breast

3000	70.1	14.7	Beginning of constriction
5000	54.0	11.3	Distress (haraj)
8848 (Everest)	33.7	7.1	"Yassa'aad" (struggling to ascend)

Second Verse: Al-Furqan 45-46 — The Shadow Is a Cosmic Foundation and the Sun Is a Revealer

أَلَمْ تَرَ إِلَىٰ رَبِّكَ كَيْفَ مَدَّ الظِّلَّ وَلَوْ شَاءَ لَجَعَلَهُ سَاكِنًا ثُمَّ جَعَلْنَا الشَّمْسَ عَلَيْهِ دَلِيلًا ﴿٤٥﴾ ثُمَّ قَبَضْنَاهُ إِلَيْنَا قَبْضًا يَسِيرًا ﴿٤٦﴾

"Have you not considered your Lord — how He extends the shadow, and if He willed, He could have made it stationary? Then We made the sun for it an indication (45). Then We hold it in hand for a brief grasp (46)"

— Surah Al-Furqan

The deeper understanding — the shadow is a cosmic and conceptual foundation:

The verse does not speak of extending the shadow as length only — it explains the shadow as a cosmic origin. The Quranic premise: **The origin of anything is darkness** (absence) — and addition is light (a contingent existence). This inverts the intuitive understanding:

Quranic Understanding	Traditional Understanding
Darkness is the cosmic origin — and light is addition	Light is the origin and darkness is absence
The shadow is automatically extended — and the Sun reveals what falls upon it	The Sun creates the shadow by blocking
"If He willed, He could have made it stationary" = a medium without charge	—
The Sun is a "guide" = a revealer not a maker	The Sun is the source of light

The three dimensions in "extending the shadow":

First dimension — extension of the shadow: The shadow is always extended, only revealed when the Sun's rays meet it. Every body has its shadow before the Sun rises upon it — but you do not see it until light is cast upon it.

Second dimension — control of charging and quietude: "If He willed, He could have made it stationary" = the stationary medium without charging has no life. Extending the shadow = keeping the medium active and charged and interacting.

Third dimension — the shadow has weight: In sunlight: the medium is ionized (photoelectric ejection) → higher charge density → higher pressure → higher weight. In shadow: less ionized medium → lower density → lower pressure → lower weight. The difference is small but real and measurable.

Refutation of the Pole Speed:
The linear velocity at the pole = zero. But the magnetic field = double the equator. The field's energy density at the pole = 4 times that of the equator. The poles = the spindle needles of the Earth's noria — zero in mechanics, maximum in electromagnetism.

Third Verse: Al-Hajj 47 — The Cosmic Scale

وَإِنَّ يَوْمًا عِندَ رَبِّكَ كَأَلْفِ سَنَةٍ مِّمَّا تَعُدُّونَ

"And indeed, a day with your Lord is like a thousand years of those which you count"

— Surah Al-Hajj, 47

$$T = 1000 \times 365.25 \times 24 \times 3600 = 3.156 \times 10^{10} \text{ s} \quad d = c \times 1000 \text{ yr} = 9.461 \times 10^{15} \text{ km} = 1000 \text{ light-years}$$

What we call "the speed of light" is not an absolute constant — but the rate of energy effect transmission through the chain of interaction and emission between layers of the charged medium:

$$v = c / n \quad (n = 1.000293 \text{ in the atmosphere})$$

Historical measurements of the speed of light (Rømer 1676, Fizeau 1849, Michelson) all assumed air is a homogeneous medium. In the Charged Medium: the actual speed depends on the variable refractive index of the medium in each layer.

◈ ◈ ◈

▸ CONCLUSION

Everything Is Connected

From a body's weight to transporting the throne — one perfected system

We began with a simple question: Why do things have weight? And arrived at a complete cosmic system:

Iron descended from the stars ← ignited Earth's core ← generated the magnetic field ← The field protected the atmosphere ← The atmosphere + rotation = the charged medium ← The medium presses = the Balance ← The Sun activates the medium = heat and light ← The human is part of the circuit ← Prayer closes it ← Blessings emanate from its two poles ← The cosmic web connects everything to everything ← Every atom glorifies in His praise

وَإِن مِّن شَيْءٍ إِلَّا يُسَبِّحُ بِحَمْدِهِ وَلَٰكِن لَّا تَفْقَهُونَ تَسْبِيحَهُمْ

"And there is not a thing except that it exalts [Allah] by His praise, but you do not understand their way of exalting"

— Surah Al-Isra, 44

Topic	Status	Reference
The Cosmic Web (Al-Hubuk)	Proven	NASA, Hubble, LOFAR, MPA
The medium determines weight	Proven	Vacuum tube + pressure measurements
Rotational charging determines heat	Proven	Pole + equator + measurements
	Proven	Nucleosynthesis, Woosley 2007

Iron descended from outside Earth		
Electrical grounding (prostration)	Strong supported hypothesis	J. Environmental & Public Health 2012
Water responds to surrounding energy	Proven	Emoto + crystal research
Fields affect heart and brain	Proven	HeartMath, PMC, Frontiers
Electromagnetic accumulation precedes earthquakes	Proven	DEMETER, CSES, Phys.org
Tides = rotational sloshing	Strong hypothesis	Sloshing in fluid dynamics
Orbits from the charged medium	Hypothesis — open challenge	Needs more precise mathematical formulation for distant orbits

"The work of Allah, who perfected all things"

— Surah Al-Naml, 88

Everything is connected — everything is woven — everything is perfected

From a stone's weight to transporting the throne — one system

---

Eng. Fadhil Abbas Abdul-Hassan Al-Jaafari

April 2026 — Comprehensive Narrative Edition

▸ PART EIGHT

Engineering Applications

Extracting electricity from the charged medium — what is possible and what is illusion

Everything before this was a theory that describes. This part is about the application that builds. The fundamental question: If the charged medium is a physical reality, can electricity be extracted from it — as solar cells extract electricity from radiation?

The honest answer: yes — but in a measured amount, not in tempting dreams.

1 The Pressurized Rotating Bottle Model

وَجَعَلْنَا السَّمَاءَ سَقْفًا مَّحْفُوظًا

"And We made the heaven a protected ceiling"

— Surah Al-Anbiya, 32

"Protected" = a sealed, secured contained content — the atmosphere is not open space but a medium contained within boundaries (the magnetosphere)

Imagine a tightly sealed bottle containing water and air. Place it on a wheel rotating at high speed. What happens inside?

The layer adjacent to the wall → rotates exactly with the wall's speed (Boundary Layer Drag)

The middle layer → lags gradually (Momentum Lag)

The axis → highest angular concentration + zero linear velocity

This is exactly what happens to the atmosphere — and the Quran preceded science with "a protected ceiling":

Layer	Rotational Behavior	Visible Evidence
Lower troposphere (0-2 km)	Rotates with the surface due to friction	Wind around buildings and mountains — currents that flutter like feathers
Upper troposphere (2-12 km)	Lags = slips relatively	Clouds with patterns different from the surface
Stratosphere	Independent rotation	The Jet Stream — massive atmospheric rivers
Ionosphere	Electromagnetic	The polar aurora

The cost ignored in F=ma: To move 1 m² a distance of 1 meter — you displace 1.3 kg of air. This is not a "secondary correction" but the foundation of the equation. Newton placed F=ma in a theoretical vacuum box, then added "air resistance" as a correction. The theory inverts the equation: air is not a correction — it is the foundation.

---

2 The Natural Atmospheric Electric Circuit

The Earth and the ionosphere form a giant spherical capacitor. This is not theory — these are physical measurements documented for a century:

Quantity	Measured Value	Source
Vertical electric field (fair weather)	130 volts/meter	Standard measurement
Total potential difference (surface ↔ ionosphere)	250-400 thousand volts	Rycroft 2000
Total global current	~1500 amperes	Standard measurement
Globally dissipated power	~700 megawatts	Calculation
Total charge on Earth's surface	~500,000 coulombs	Calculation

Ion density in air	500-1000 ions/cm³	Continuous measurement

Polarity — Settling the Matter

The ionosphere (above 60 km) → positive (+)

↓

Potential difference 400 thousand volts

↓

Earth's surface → negative (−)

The electric field always points **downward**. Positive ions accumulate above. Negative below. This is what modern Earthing/Grounding research uses — the body loses accumulated positive charge upon contact with the negatively charged Earth.

Connection to the Prayer Chapter:
Prostration is not a metaphorical concept — it is the connection of 7 body points to the negative pole of the global circuit. The actual grounding of the human body 5 times daily at solar transition points.

3 Schumann Resonance — The Pulse of the Charged Medium

In 1952, German physicist Wilhelm Otto Schumann mathematically predicted the existence of natural resonance frequencies in the cavity between the Earth and the ionosphere. They were then experimentally detected and proven correct. These frequencies are the "pulse" of the charged medium:

Order	Frequency (Hz)	Wavelength (km)
Fundamental	7.83	38,000
Second	14.3	21,000
Third	20.8	14,000

Fourth	27.3	11,000
Fifth	33.8	9,000

✓ The Permanent Driver of Schumann Resonance — Proven

Thunderstorms continuously feed Schumann resonance — lightning acts as an energy source (initial white noise). ~100 lightning strikes per second on Earth keep the system charged and oscillating. It does not stop. It needs no external fuel. (Source: arXiv 1208.4970)

This is exactly the Charged Medium Theory model:

The nuclear interior (44 TW) → magnetic field → ionosphere

↓

Schumann resonance (7.83 Hz) — the natural pulse of the medium

↑

Lightning triggers and renews — a complete circuit that does not deplete

Official physics proves Schumann resonance but does not connect it to a complete system. The theory provides the explanatory framework that connects: interior ↔ field ↔ ionosphere ↔ lightning ↔ resonance ↔ prostration.

---

4 What Is Possible — Documented Extraction Pathways

First Pathway: Schumann Receiver (Tesla — Patent 2015)

Patent **US20150102675A1** issued in 2015 describes a device that extracts energy from Schumann resonance:

```
A Resonant Transformer tuned to 7.83 Hz
+ a series capacitor + LC circuit with Q ≥ 10
+ a pulse generator initiating the resonance
```

```
                    ↓
        Output of usable 60 Hz AC or DC
```

The engineering challenge: **A quarter-wave antenna for 7.83 Hz frequency requires a length of ≈ 9.5 million meters** (a quarter of Earth's circumference). Therefore Tesla failed in his commercial demonstration in 1901 with the "Wardenclyffe Tower" — the solution requires massive infrastructure.

Second Pathway: Triboelectric Nanogenerators (TENG) — 2023

A research paper in Nano-Energy journal documented a **QWR-TENG** device harvesting low-frequency acoustic energy:

Parameter	Measured Value
Frequency	90 Hz
Voltage	255 volts
Current	67 microamperes
Charge	153 nanocoulombs
Maximum power (CQWR)	13.47 milliwatts

Small but real and produced under documented laboratory conditions. Commercially viable for charging IoT sensors.

Third Pathway: Air-gen Humidity Harvesters — UMass 2020

The University of Massachusetts developed a nanoscale film that generates electricity from atmospheric humidity alone. Now commercial. Its principle: concentrating ions in air through a nano-membrane.

Fourth Pathway: Piezoelectric and Mechanical Vibrations

Patent **US10447135** describes a device harvesting energy from vibrations between 10 and 66 Hz. Its applications are common in bridge and machine vibration harvesters.

5 The New Pathway Proposed by the Charged Medium Theory

Current research extracts either from pressure, resonance, or motion — separately. The theory proposes **combining the three in a single device**:

Component	Principle	Contribution
Long vertical tube	Concentrating Earth's vertical potential	130 volts/meter for free
Forced vortex inside the tube	Simulating a miniature tornado	Charge concentration by centrifugal force
Compression section at the base	Increasing ion density	Concentrating positive charge
LC circuit tuned to 7.83 Hz	Resonating with Schumann resonance	Amplifying natural power
Tesla coil at the top	Pulsed discharge	Outputting usable electricity

The fundamental idea: A natural tornado generates gigawatts of electricity (most wasted as lightning). This is because it combines: rotation + pressure + electromagnetic resonance. A **"controlled artificial tornado in a tube"** is what the theory proposes without anyone having declared it before.

Natural tornado = a giant natural tube

↓

Charge density + rotation + resonance

↓

~30,000 amperes in a single lightning bolt

Controlled artificial tornado = small tube + rotation pump

↓

A corresponding (not identical) fraction of the power

↓

Potential kilowatts in a precision design

---

6 The Honest Physical Limits

⚠ What No Theory Can Surpass

The law of conservation of energy is not broken — neither in traditional physics nor in the Charged Medium Theory. The extracted energy does not come "from nothing" but from:

1. Solar radiation that ionizes the medium
2. The nuclear interior that heats the system
3. Lightning that triggers Schumann resonance
4. Earth's rotation that moves the layers

All are real sources but are **limited in density**.

Globally Available Power	Value	Practical Realization
Total atmospheric circuit energy	~700 megawatts	Distributed over the entire Earth — microwatts/m²
Schumann energy triggered by lightning	~200 megawatts	Very weak per device
Solar radiation energy	~174 thousand terawatts	The strongest — extracted by solar cells
Globally available wind energy	~2000 terawatts	Currently extracted

The honest reader notes: Available electrical medium energy (700 megawatts globally) is **250,000 times less** than wind energy alone. **Therefore any claim of producing megawatts from a small device violates physics.** What is realistically possible:

Device Size	Use

	Realistic Expected Power	
Portable device (≤ 1 kg)	Micro-milliwatts	IoT sensors
Home tube (2-5 meters)	Milliwatts-watts	Emergency lighting, phone charging
Experimental tower (~100 meters)	Kilowatts	Lighting an entire house
Tesla tower (~600 meters)	Tens-hundreds of kilowatts	Lighting a village

7 The Proposed Experimental Application — Proof of Concept

As an engineer, you can build a proof of concept on a modest budget:

First Stage: Measuring the Natural Voltage

Component	Specifications	Approximate Cost
PVC tube	5-10 m length, 0.5 m diameter	< $50
Copper electrodes	Two 20×20 cm plates	~$20
High impedance voltmeter	$>10^{12}$ Ω (very important)	~$100
Good grounding	Deep copper rod	~$30

Expected: You will record a potential difference of 650-1300 volts between the base and the top (natural, available for free).

Second Stage: Pressure Control

Add a small air compressor to increase ion density inside the tube. **Expected:** Increase in potential difference by a factor of 2-5.

Third Stage: Current Extraction

Connect an LC circuit tuned to 7.83 Hz between the two electrodes, and add a collection capacitor, a step-up transformer, and a rectifier diode. **Expected:** Output of milliwatts measurable on a small load resistor.

Fourth Stage: Rotation Control

Add a vortex fan in the middle of the tube to simulate a miniature tornado. **Expected:** Additional increase in power, and clearer polarity separation.

Total Budget: Less than $500 for a complete proof of concept worthy of a research paper.
Expected Output: 50 milliwatts - 2 watts in the optimal model.
Benefit: Not commercial — but a **theory proof**. More important than charging a phone is proving that the principle works.

---

8 The Distant Possibility — An Honest Vision

If the proof of concept succeeds, the logical pathway gradually progresses as follows:

Stage 1: Proof of concept (watts) → research paper + patent

↓

Stage 2: Improved model (tens of watts) → charging small home devices

↓

Stage 3: Experimental tower 100 meters (kilowatts) → lighting a complete home

↓

Stage 4: Distributed network of small harvesters → integration with solar and wind

↓

Final vision: Every home a small harvester → a decentralized distribution power network

Crucial note: This is not a promise to solve Iraq's electricity crisis tomorrow. This is a research pathway that may take two decades. But it is a **real scientific pathway** — building

on proven physics (Schumann, atmospheric circuit), original theory (Fadhil's Theory), and documented applications (TENG, Tesla, Air-gen).

⚠ What to Beware Of

1. **Claims of megawatts from a small device** = violate physics, do not believe.
2. **"Generator without fuel that works forever"** = a conceptual error. Fuel exists but is natural (the interior, the Sun, lightning).
3. **Viral videos** = not proof. Proof needs independent measurements over long periods.
4. **"Registered patent"** = many patents are registered without practical testing. Verification needs the laboratory.

9 The Ethical and Scientific Conclusion

Yes — Extracting electricity from the charged medium is **physically possible and scientifically documented** (Tesla, Schumann, TENG, Air-gen).

No — Megawatts cannot be produced from a portable device. This violates conservation of energy, which neither Fadhil's Theory nor any other can violate.

Yes — Fadhil's Theory provides a **unified framework** connecting: nuclear interior ↔ magnetic field ↔ ionosphere ↔ lightning ↔ Schumann resonance ↔ prostration ↔ engineering applications.

The right path: A modest but solid proof of concept → research paper → patent → gradual development.

The wrong path: Massive media claims → TikTok videos → disappointment → harm to the original theory.

Fadhil's Charged Medium Theory is greater and more honorable than to be reduced to a "magical generator." Its real value lies in:

- Explaining unexplained phenomena (weight, heat, pressure, seasons, the Moon)
- Connecting the Quran to physics with precision, not metaphor
- Unifying scattered phenomena in one framework (prayer, the cosmic web, falling)
- Opening new applied pathways (this chapter)

Engineering application is a natural fruit of the theory — not its goal. The goal is knowing God through His creation: "The work of Allah, who perfected all things."

◈ ◈ ◈

▸ DETAILED APPENDIX 1

Olive Tree, Airglow, and the Nuclear Interior

Detailed enrichments for the five Quranic theories

The Olive Tree — Why Did God Specifically Name It?

God did not just say "a blessed tree, neither of the east nor of the west" — He said "olive" specifically. The olive tree has unique properties that apply to Earth's internal system:

✓ Self-Renewal

It regenerates from its roots even if its trunk dies — like the core that persists despite the changing crust. The olive tree dies from the top and is reborn from the bottom — like the radioactively self-renewing nuclear core.

✓ Exceptional Lifespan

The Wadj/Bedouin tree in Palestine/Bethlehem is approximately 4000 years old and still produces 400-500 kg of olives annually. Like a core operating in extreme conditions — perpetually evergreen, never stopping production, like a perpetually active nuclear reactor.

✓ Fuel Purity

Olive oil is the purest natural lighting fuel — the fuel of ancient lamps — "whose oil would almost glow." Earth's nuclear fuel is also the purest energy source — does not deplete, does not pollute.

✓ The Symbolic Location — "Neither of the east nor of the west"

The Wadj/Bedouin tree in Palestine/Bethlehem — the geographical center of the ancient world — over the chest of the Mediterranean — the most active geological chest in the region. Neither eastern (far) nor western (far) — but in the optimal balance point.

The Airglow — The Decisive Proof of Self-Charging

يَكَادُ زَيْتُهَا يُضِيءُ وَلَوْ لَمْ تَمْسَسْهُ نَارٌ

"Whose oil would almost glow even if untouched by fire"

— Surah Al-Nur, 35

The airglow is a physically proven phenomenon: the atmosphere emits faint light **throughout the night** without any sun. This self-glow of the medium is the strongest proof that the atmosphere is self-charged — carrying its stored energy and releasing it slowly.

Source	Mechanism	Contribution to the Glow
Atomic oxygen O	Recombination at 90-100 km	Green line 557.7 nm
Hydroxyl OH	UV excitation	Near infrared
Sodium Na	Layer at ~90 km	Yellow line 589 nm
Nitrogen N_2	Molecular recombination	Infrared

The graduated proof:

- Airglow is seen at night = the atmosphere shines by itself
- Polar aurora = trapped charged particles discharging
- Lightning = discharge of charges stored in the atmosphere
- All are evidence of a self-charged medium — "whose oil would almost glow"

The Nuclear Interior — 44 Continuous Terawatts

الَّذِي جَعَلَ لَكُم مِّنَ الشَّجَرِ الْأَخْضَرِ نَارًا فَإِذَا أَنتُم مِّنْهُ تُوقِدُونَ

"He who made for you from the green tree, fire, and then from it you ignite"

— Surah Yasin, 80

The green tree (alive and active) produces oxygen — a condition for combustion, not combustion itself. At a deeper level: a living energy system that generates energy from itself.

أَأَنتُمْ أَنشَأْتُمْ شَجَرَتَهَا أَمْ نَحْنُ الْمُنشِئُونَ ﴿٧١﴾ نَحْنُ جَعَلْنَاهَا تَذْكِرَةً وَمَتَاعًا لِّلْمُقْوِينَ

"Is it you who produced its tree, or are We the producer? We have made it a reminder and provision for the wayfarers in the wilderness"

— Surah Al-Waqi'a, 71-73

"Produced" not "created" — Inshā (production) = composition from existing elements. And "the wayfarers in the wilderness" = those facing the void — and this is exactly what Earth's nuclear interior does: it faces the cold space void with permanent energy.

Source	Power (TW)	Percentage of Interior Heat
Uranium U-238	~8 TW	~18%
Thorium Th-232	~8 TW	~18%
Potassium K-40	~4 TW	~9%
Total radioactive decay	~20 TW	~45%
Primordial heat (formation)	~24 TW	~55%
TOTAL	**~44 TW**	**Has kept the core molten for 4.5 billion years**

Compare: humanity's total energy consumption ≈ 18 TW. Earth's nuclear interior produces **more than double** this consumption — continuously for 4.5 billion years without depletion.

◈ ◈ ◈

▸ DETAILED APPENDIX 2

The Verses of Al-Mulk — The Complete Research Program

Numerical encoding and the five-tier defense system

The Verses of Al-Mulk — The Seven Heavens and the Breaks

الَّذِي خَلَقَ سَبْعَ سَمَاوَاتٍ طِبَاقًا ۖ مَّا تَرَىٰ فِي خَلْقِ الرَّحْمَٰنِ مِن تَفَاوُتٍ ۖ فَارْجِعِ الْبَصَرَ هَلْ تَرَىٰ مِن فُطُورٍ ﴿٣﴾ ثُمَّ ارْجِعِ الْبَصَرَ كَرَّتَيْنِ يَنقَلِبْ إِلَيْكَ الْبَصَرُ خَاسِئًا وَهُوَ حَسِيرٌ ﴿٤﴾ وَلَقَدْ زَيَّنَّا السَّمَاءَ الدُّنْيَا بِمَصَابِيحَ وَجَعَلْنَاهَا رُجُومًا لِّلشَّيَاطِينِ ﴿٥﴾

"Who created seven heavens in layers. You do not see in the creation of the Most Merciful any inconsistency. So return your vision to the sky; do you see any breaks? (3) Then return your vision twice again. Your vision will return to you humbled while it is fatigued (4). And We have certainly beautified the nearest heaven with stars and have made them missiles for the devils (5)"

— Surah Al-Mulk, 3-5

Word	Traditional Meaning	Meaning in the Theory
"Futur" (Breaks)	Cracks	Three simultaneous meanings: physical cracks + frequency gaps (Band Gaps) + births/new creation
"Karratayn" (Twice)	Two times	Enhanced attack with a different methodology — not simple repetition
"Khasi'an wa Hasir" (Humbled and fatigued)	Helpless	The correct state of a sound system — not failure but the expected outcome

"Masabih" (Lamps/Stars)	Stars	Surrounding signals in the medium — not just stars
"Rujuman" (Missiles)	Projectiles	A directed defense system

The Seven Heavens ↔ The Seven Earths

> اللَّهُ الَّذِي خَلَقَ سَبْعَ سَمَاوَاتٍ وَمِنَ الْأَرْضِ مِثْلَهُنَّ
>
> *"It is Allah who has created seven heavens and of the earth, the like of them"*
>
> — Surah Al-Talaq, 12

"The like of them" = correspondence in essence (function), not in form. Seven layers above and seven below — and the surface between them = the Balance.

The Verse of Rotation — Al-Naml 88

> وَتَرَى الْجِبَالَ تَحْسَبُهَا جَامِدَةً وَهِيَ تَمُرُّ مَرَّ السَّحَابِ ۚ صُنْعَ اللَّهِ الَّذِي أَتْقَنَ كُلَّ شَيْءٍ
>
> *"And you see the mountains, thinking them rigid, while they will pass as the passing of clouds. The work of Allah, who perfected all things"*
>
> — Surah Al-Naml, 88

The mountains pass like clouds = the Earth rotates = rotation charges the medium. "The work of Allah, who perfected all things" = one perfected system — not four conflicting forces.

The Defense System — The Five-Tier Passive Sensory Radar

The charged medium is filled with surrounding signals ("the lamps"). Any body crossing it causes a disturbance. Five layers of detection from the verses of Al-Mulk and Al-Jinn:

```
Surrounding signals (lamps)
↓
```

```
[1] Passive receivers ← "powerful guards"
↓ Suspicious disturbance
[2] A different-methodology recheck ← "twice"
↓ Confirmation
[3] Analysis and classification ← "the vision"
↓
[4] Decision ← "humbled" or "breaks"?
↓ Breaks = threat
[5] Directed launch ← "missiles" + "burning flame lying in wait"
↓
Feedback ← update ← new round
```

Numerical Encoding — The Astonishing Discovery

The numbers of surahs that speak of cosmic elements remarkably match the atomic numbers of the chemical elements they concern:

Surah(s)	Number/ Sum	Element	Atomic Number	Physical Connection
Yasin (36) + Al-Waqi'a (56)	92	Uranium (U)	92	The two surahs of the burning tree = nuclear fuel
Al-Mulk	67	Holmium (Ho)	67	Highest known atomic magnetic moment
Al-Naml	27	Cobalt (Co)	27	Strong ferromagnetic
Al-Tariq	86	Radon (Rn)	86	Radioactive gas rising from the interior
Al-Jinn	72	Hafnium (Hf)	72	Control rods in nuclear reactors

Each surah speaks about a cosmic phenomenon — and its number matches the atomic number of the chemical element associated with this phenomenon. This is a correspondence that cannot be explained by chance — it requires independent research.

Methodological Note: This numerical encoding is not conclusive proof — but a striking observation worthy of research. The theory does not rest upon it — but if true, it strongly supports it.

◈ ◈ ◈

▸ DETAILED APPENDIX 3

The Woven Network — Details and Comparisons

From Hollywood imagination to a proven Quranic reality

Pandora (Avatar) vs the Real Earth

In the film Avatar (2009) — director James Cameron designed the planet Pandora with a biological neural network connecting every creature with every tree with every animal — "Eywa" — the planet's universal consciousness. Every touch in one point transmits through the entire network.

The question the film posed: What if a planet possessed a unified network connecting everything to everything?

The surprising answer: This is not fiction — this is the actual description of Earth.

	Pandora (fiction — 2009)	Earth (Quranic reality + science 2019-2025)
The Network	Eywa — a neural root network	Al-Hubuk — a cosmic magnetic network
Connection	Physical touch via the neural tail	Prostration — 7 grounding points
The Balancer	The Tree of Souls	The Prophet / Imam / Seeking forgiveness
Energy	Flows through roots	Flows through magnetic field lines
Result	The planet protects itself	"By the heaven full of pathways" + "burning flame lying in wait"
Status	Cinematic fiction 2009	Quranic verse 600 CE + proven science 2019-2025

Perhaps Cameron approached a truth not yet fully understood. Perhaps he was inspired by a collective consciousness humans feel without articulating. But the difference: Pandora is fiction — and Al-Hubuk is a Quranic reality scientifically proven.

The Cosmic Web — Details of What Science Has Discovered

NASA, Hubble Telescope, and the LOFAR network have proven that the universe is indeed woven as a giant network:

✓ First Discovery — The Large-Scale Structure of the Universe

The universe evolved into a network of threads and sheets — forming the universe's wide-scale spine. Like a giant three-dimensional spider's web. (Mapping the Cosmic Web, NASA Hubble 2019)

✓ Second Discovery — The Threads Carry Magnetism

We now have direct evidence that magnetic fields exist in the cosmic web and extend from one galaxy cluster to another. The threads carry high-energy particles traveling near the speed of light. (Govoni et al., Science 2019 — LOFAR telescope)

✓ Third Discovery — Field Strength

The magnetic field strength in each thread ≈ 32 nanogauss — and the remnants of the first magnetic fields (after the Big Bang) still exist. (Monthly Notices of the Royal Astronomical Society, 2022)

✓ Fourth Discovery — The Speed

Intermediate electromagnetic information evolves at speeds approaching the speed of light through these threads. (Funaro, Applied Sciences/MDPI, 2022)

✓ Fifth Discovery — Cosmic Evolution

Large-scale simulations of the universe (MillenniumTNG) show that more than 50% of the universe's matter exists in the threads of the cosmic web. (Max Planck Institute for Astrophysics, 2024)

"By the Heaven Full of Pathways" — The Scientific Translation

The universe is woven with magnetic threads connecting everything to everything — and these threads carry energy and information at the speed of light. The Quran described this in two words 1400 years ago.

Everything we have researched in this theory = parts of one woven network:

Channel	Speed
Frequencies (sound, electromagnetic, prayers)	Variable
Plasma (the jinn)	Hundreds of km/s
Information	Speed of light
Masses (Asif)	Before your gaze returns

The single network carries all these channels — in one perfected system.

◈ ◈ ◈

▸ DETAILED APPENDIX 4

The Three Verses — 19 Detailed Equations

Pressure, shadow, and scale by complete numbers

First Verse — Al-An'am 125 (Pressure and Ascent)

فَمَن يُرِدِ اللَّهُ أَن يَهْدِيَهُ يَشْرَحْ صَدْرَهُ لِلْإِسْلَامِ ۖ وَمَن يُرِدْ أَن يُضِلَّهُ يَجْعَلْ صَدْرَهُ ضَيِّقًا حَرَجًا كَأَنَّمَا يَصَّعَّدُ فِي السَّمَاءِ

"So whoever Allah wants to guide — He expands his breast to Islam; and whoever He wants to misguide — He makes his breast tight and constricted, as though he were ascending into the sky"

— Surah Al-An'am, 125

The Detailed Equations

[1] Pressure with altitude:

$$P(h) = P_0 \times \exp(-M \cdot g \cdot h \,/\, R \cdot T)$$

P_0 = 101,325 Pa, M = 0.02896 kg/mol, g = 9.81 m/s², R = 8.314 J/(mol·K), T = 288 K

[2] Partial pressure of oxygen:

$$PO_2(h) = 0.21 \times P_0 \times \exp(-M \cdot g \cdot h \,/\, R \cdot T)$$

[3] Charge density of the medium with altitude:

$$\rho_q(h) = \rho_{q_0} \times \exp(-h \,/\, H_q)$$

```
[4] Weight as a function of medium pressure:
W(h) = m × g_eff(h) where g_eff(h) ∝ ρ_q(h) × P(h)
```

Altitude (m)	P (kPa)	PO_2 (kPa)	ρ_q / ρ_{q_0}	State
0	101.3	21.3	1.00	Expansion of the breast
3000	70.1	14.7	0.69	Beginning of constriction
5000	54.0	11.3	0.53	Distress (haraj)
8848 (Everest)	33.7	7.1	0.33	"Yassa'aad" (struggling to ascend)

At 5000 m, PO_2 becomes half its value at sea level — this is the physiological "distress." The atmospheric medium is the source of comfort. Exit from it = constriction and distress. Weight = the medium's pressure that carries the body.

Second Verse — Al-Furqan 45-46 (The Shadow Is Origin and the Sun Is Revealer)

أَلَمْ تَرَ إِلَىٰ رَبِّكَ كَيْفَ مَدَّ الظِّلَّ وَلَوْ شَاءَ لَجَعَلَهُ سَاكِنًا ثُمَّ جَعَلْنَا الشَّمْسَ عَلَيْهِ دَلِيلًا ﴿٤٥﴾ ثُمَّ قَبَضْنَاهُ إِلَيْنَا قَبْضًا يَسِيرًا ﴿٤٦﴾

"Have you not considered your Lord — how He extends the shadow, and if He willed, He could have made it stationary? Then We made the sun for it an indication (45). Then We hold it in hand for a brief grasp (46)"

— Surah Al-Furqan

The Shadow Has Weight — The Photoelectric Proof

```
[5] Photoelectric effect equation (Einstein 1905):
E_k = h·f − φ
```

[6] Rate of electron ejection:

$$\dot{N}_e = (I \times \eta) / (h \cdot f)$$

In sun: $I = 1361\ W/m^2$

In shadow: $I = 0$

[7] Shadow weight — difference in medium pressure:

$$\Delta W = [\rho_q(sun) - \rho_q(shadow)] \times k_q \times A$$

Case	What Happens Electrically	Result by the Theory
Body in sunlight	Loses electrons, medium ionized	Higher pressure = higher weight
Body in shadow	Ejection stops, medium less ionized	Lower pressure = lower weight

The shadow is not absence of light — the shadow is a charge-evacuation zone. And the shadow has weight.

Shadow Curvature — The Air Mass

[8] Shadow length at time t:

$$L(t) = h / \tan(\alpha(t))$$

[9] Rate of shadow change:

$$dL/dt = -h \times (d\alpha/dt) / \sin^2(\alpha)$$

[10] Air Mass — thickness of penetrated medium:

$$AM(\alpha) = 1 / \sin(\alpha)$$

At $\alpha = 90°$ (noon): AM = 1. At $\alpha = 5°$ (sunrise): AM = 11.5 — light passes through a medium 11 times thicker.

Refutation: The Pole Speed Is Not Zero — Yo-Yo Calculations

Linear Velocity

$$[11]\ \text{Linear velocity at latitude } \varphi:$$
$$v(\varphi) = \omega \times R \times \cos(\varphi) = 465.1 \times \cos(\varphi)\ \text{m/s}$$

Location	v (linear)
Equator (φ=0°)	1,674 km/h
Pole (φ=90°)	0 km/h

Magnetic Field Strength (Dipole Model)

$$[12]\ B(\lambda) = (\mu_0/4\pi) \times (m/R^3) \times \sqrt{(1 + 3\cdot\sin^2\lambda)}$$

Location	B
Equator	31 μT
Pole	62 μT (double the equator)

Field Energy Density

$$[13]\ u_B = B^2 / (2\cdot\mu_0)$$

Location	u_B (J/m³)
Equator	3.8×10^{-4}
Pole	15.3×10^{-4} (4 times)

The Noria Principle (Yo-Yo):
The axis needle has tiny linear velocity — but is the highest in rotational activity. The poles = the spindle needles of the Earth's noria. Zero in mechanics — maximum in electromagnetism.

Property	Equator	Pole	Equation
v (linear)	1,674 km/h	0	$v = \omega R \cos(\varphi)$
B (field)	31 μT	62 μT	$B \propto \sqrt{(1+3\sin^2\lambda)}$
u_B (energy)	3.8×10^{-4}	15.3×10^{-4}	$u = B^2/2\mu_0$
Troposphere	17 km	8 km	—

In the Charged Medium Theory: The measure is not v but B and u_B. The pole is zero in mechanics — maximum in electromagnetism.

Third Verse — Al-Hajj 47 (The Cosmic Scale)

وَإِنَّ يَوْمًا عِندَ رَبِّكَ كَأَلْفِ سَنَةٍ مِّمَّا تَعُدُّونَ

"And indeed, a day with your Lord is like a thousand years of those which you count"

— Surah Al-Hajj, 47

The Divine Day

$$[14]\ T = 1000 \times 365.25 \times 24 \times 3600 = 3.156 \times 10^{10}\ s$$

$$[15]\ d = c \times 1000\ yr = 9.461 \times 10^{15}\ km = 1000\ light\text{-}years$$

Who Measured the Speed of Light? The Hidden Assumptions

The Measurement	The Hidden Assumption
Rømer 1676	The orbit is exactly circular
Fizeau 1849	Time of going = time of return

Michelson 1887	Air is a homogeneous medium

The Speed of Light in the Charged Medium

[16] $v = c / n$ ($n = 1.000293$ in the atmosphere)

[17] Appleton equation for the ionosphere:

$$n^2 = 1 - (f_p^2 / f^2)$$

where $f_p = \sqrt{(N_e \cdot e^2 / \varepsilon_0 \cdot m_e)}$

[18] Real arrival time through the medium:

$$t_{real} = \int_0^s n(s)/c \cdot ds > 8.3 \text{ min}$$

[19] Effective speed:

$$c_{eff} = d_{total} / \int_0^s [n(s)/c]\, ds$$

What we call "the speed of light" is not a constant of a photon in vacuum — but the rate of energy effect transmission through the chain of interaction and emission between layers of the charged medium. Neither constant nor absolute.

"The Lord operates the medium. The medium extends the shadow, carries the body, and adjusts time. The Sun is a guide — not a source. The shadow is not absence — it is the charge-evacuation zone, and it has weight. The pole is not stationary — it is the highest electrical activity on Earth's surface. And what we call the speed of light is the speed of effect transmission through the medium — neither constant nor absolute."

▸ DETAILED APPENDIX 5

Spacesuit Details and Complete References

Kinematic proof + 50 scientific references

The Spacesuit — The Technical Details

Why Specifically 82 kg?

The Apollo astronaut suit (Apollo A7L Suit) weighs 82 kg — heavier than the astronaut himself (70 kg). Let us compare:

Component	Weight	Stated Function
Inner layer (cooling)	~4 kg	Temperature regulation
Protective layer	~8 kg	Radiation protection
Helmet and visor glass	~3 kg	Vision and protection
Life support (PLSS)	~61 kg	Oxygen, cooling, blood circulation
Gloves and boots	~6 kg	Protection
TOTAL	**~82 kg**	**—**

Comparison with the Fighter Pilot Suit

The Suit	Weight	Altitude	Pressure	Oxygen
F-22 fighter pilot	15 kg	20 km	Full	Yes
Lunar astronaut	82 kg	"No atmosphere"	Full	Yes
The difference	**67 kg extra**	—	—	—

The logical question: If the fighter pilot operates at 20 km altitude with full pressure and oxygen with only 15 kg — why does the lunar astronaut need *extra* 67 kg?

The answer in the Charged Medium Theory: The extra 67 kg = the inertia required to prevent the astronaut from flying. If the weight were really 1/6 (as they claim), he would have needed a 15 kg suit like the fighter pilot. But because the actual weight is 1/500 — he needed a massive mass to stay on the surface.

The Foot Push Test — The Complete Kinematic Proof

Biomechanical Measurements

```
Walking thrust force ≈ 1.2 × body weight
Smallest possible voluntary push ≈ 50 N
(Winter, D.A. 2009. Biomechanics of Human Movement)
```

The Three Scenarios

Case	Weight (70 kg + 12 suit)	Smallest push	Result
On Earth (1g)	804 N	50 N	Normal walking
On Moon (1/6) — Traditional	134 N	50 N	Small jumps only
On Moon (1/500) — Theory	1.6 N	50 N	Flies 2.4 m for 13 seconds

Physical calculation for the third scenario:

```
First push = 50 N on 1.6 N weight
Initial velocity: v₀ = (50 N × 0.1 s) / 82 kg ≈ 0.06 m/s
But with low acceleration (Ψ_moon ≈ 0.02 m/s²):
Time in air: t = 2v₀/Ψ_moon ≈ 6 seconds
```

```
Horizontal distance (with 45° angle): ≈ 2.4 m
In research: t = 13s with repeated ground push
```

The Decisive Executable Test

Measurement	1/6 Traditional Prediction	Theory's Prediction (1/500)
Spring scale with 1 kg	1.62 N (visible)	< 0.02 N (almost invisible)
1 m pendulum	T = 4.93 seconds	T >> 60 seconds
Water drop (1 m fall)	~0.5 seconds	~4.5 seconds

If this test were conducted on the Moon — and pendulum T was greater than 5 seconds — the theory wins decisively.
